Research Projects

Master of Technology Dissertation Title:

Department Mini Project (Duration: July, 2007 – December, 2008)

in silico Analysis of Anti-tubercular Drugs and their Targets was performed. Under this project targets of Anti-Tubercular Drugs were analyzed. This may be an approach to find related targets in other pathogenic species through homology based searches. Similarity between targets related to the same drug was also assessed. The approach may prove useful for finding new targets for

existing drugs and vice-versa.

Major Project (Duration: January, 2008 – June, 2008)

in silico Analysis of Antibiotics and their Targets. This project was extension of my previous project. In this project I tried to correlate the Binding sites of Homologues Targets of DNA gyrase subunit A with Gemifloxacin by using AUTODOCK TOOL.
